

INFORMATION FOLLOWING CROWN OR BRIDGE TREATMENT

- Following the first appointment for a crown or bridge procedure, a temporary is usually placed on the tooth or teeth involved. This will protect them while the custom restoration is being made.
- Temporary crowns are of a universal size and shade that also serve a cosmetic function for front teeth. Your final restoration will be shaped and shaded more naturally than the temporary to match your other teeth in both color and function.
- The use of a temporary cement is for easy removal on your next appointment. If your temporary comes off between appointments, slip it back on and call us for an appointment.
- Many crowns fit below the gumline. Therefore, you may experience some discomfort for a few days due to the irritation of that area during the procedures. Sensitivity to cold or pressure is also possible.
- After the final cementation of your fixed restoration, it may take a few days to get used to the new crown or bridge. If you feel the bite is not correctly balanced, be sure and call for an appointment for a simple adjustment.
- Proper brushing and flossing is recommended to help you retain your final restoration. The only area that a crowned tooth can decay is at the edge of the crown at the gumline.
